

The dead heat is built during the final day

Constant sample of 3,905 games priced at all seven horizons on both exchanges. Both exchanges sharpen monotonically and are indistinguishable at every horizon.

horizon_cross.log, horizon_equivalence.log · the T-24h book lead is $z=+1.86$, $p=0.063$ - it does NOT survive BH at $q=0.05$, and is reported as suggestive.
