

The same arithmetic, bracketed by both measured cost rates

A weekly bettor keeps between 30% and 12% of a bankroll across one season. Which end you land on depends on the cost measure, not on whether the prices were any good.

horizon_translation.log · the STRUCTURAL rate is the anchor: it is fixed by the quote and the fee schedule. The realized rate agrees but its game-clustered 90% CI runs -19.5% to +2.9% over 513 games - outcomes are noisy, the cost is not.
